

SOS PRESS - SHDS High Efficiency Dual Station Heat Press

Built with dual work stations, this heat press allows super fast and smooth operation, which doubles the operating speed from any regular single-station heat press. The upper platen moves smoothly between heat stations and operators can load items onto one station when the other station is in use. Pneumatic control and automatic open of the press allow effortless and worry-free operations.

Safety measure in design: The heat press is operated by pressing two side-facing buttons, to avoid accidental hand burns.

The dual station heat press comes standard with 16"x20" platens. Other sizes can be custom ordered.

Key Specifications

- Digital screen controls, with live digital time and temperature reading and signal alarms
- Heat wire and platens in one piece, for safety, durability and uniform heat distribution
- Special ultra-precision line pipe technology to ensure uniformity and stability of temperature
- Emergency stop button
- Pneumatic control valve set pressure
- Powered by an air compressor (not included)
- 110v/60HZ
- Size/weight: 37"x28"x29", 120kg
- 1 year standard warranty
